

Gregor Trimmel obtained his MSc-degree as well as his PhD at the Vienna University of Technology. Within his PhD-thesis as well as during his subsequent post-doctoral research stays at the University Paris VI, Pierre and Marie Curie in France and the University of Padova, Italy, he focused on the synthesis and characterization of inorganic-organic hybrid materials. He joined the Institute for Chemistry and Technology of Materials (ICTM) at the Graz University of Technology in 2002 and finished his habilitation in 2008 on synthetic routes towards functional polymers and patterned surface layers. In 2019, he was appointed as full professor for Chemistry and Technology of Organic Materials. Since 2004, he leads the photovoltaic materials research group at the ICTM, focusing on emerging solar cell materials, especially perovskite and polymer-based solar cells.
