

Nicolas Illy received a M. Sc. Degree in Chemistry from the Ecole Nationale Supérieure de Chimie in Montpellier (France) and from Friedrich-Schiller University in Jena (Germany). After completing his PhD in Polymer Science from Paris-Est University under the supervision of Prof. J. Penelle, he obtained a postdoctoral position in Prof. M. Winnik's group at the University of Toronto (Canada). Subsequently, he joined Prof. David's group at the Charles Gerhardt Institut (Montpellier, France). In 2013, he joined the Polymer Chemistry Team at Sorbonne University in Paris where he is actually associate professor. His research focuses on macromolecular engineering, anionic ring-opening polymerization, design and development of functional materials for biomedical applications and development of new bio-based materials.
